

Question: Can I get CCTV images on my TV?

Answer: Yes getting your CCTV images onto your TV screen is easy, here's how you can do it...

5 easy ways to get CCTV images on your TV!

1) Connect your DVR to your TV using an HDMI lead

HDMI is now a universally standard connector on most video & audio devices including DVRs and TVs. The fastest way to get a CCTV image from your DVR onto your TV is simply connecting an HDMI lead between the two. Make sure you opt for a quality lead for a crisp, clear picture.

**Recommended product – 10M HDMI Lead
(Code: VID510)**

2) Display your CCTV on multiple TVs using an HDMI distributor

HDMI Distributors or splitters are a great way to run a CCTV signal from your DVR to a number of screens or TVs. Simply fit the splitter and DVR in your roof space or a locked cupboard and view the images from any room in the property.unwanted visitors.

**Recommended product – 4 way HDMI
Distributor
(Code: HDM324)**

3) Watch your CCTV as a separate TV channel using a Digital Modulator

Most homes still use a co-ax as a way to distribute TV signals from the aerial to the various TVs within the property so a digital modulator allows you to make the best of this set up and use it to distribute your home CCTV through this same co-ax network. It works by allowing the HDMI output of a DVR (or other equipment such as a satellite box) to be converted into a digital RF signal or 'Digital TV channel' so you can distribute it around a home and watch it on any TV, just like a real digital TV channel.

**Recommended product – Digital Modulator
(Code: MOD300)**

4) Connect your CCTV to a TV over CAT5 using the HDMI mule

This allows you to view and control your HDMI video from up to 120m away from your DVR using your existing CAT5/6 set-up, with no mess, no extra cables and no extra costs - yes, it really is that simple!

**Recommended product – HDMI Mule - HDMI over CAT5
(Code: HDM220)**

5) Transmit a wirefree CCTV signal to your TV for extra security

Some CCTV camera locations make it difficult or impossible to get cable back to the DVR (eg, over a road). If you have power at your remote location use the wirefree Videomitter and simply send it back straight into your TV. Use the TV's existing composite video input or Scart connection to feed the image on to one of the AV channels.

**Recommended product – Wireless Video Transmitters
(Code: MINIMITS)**
